Dear Bundeskanzler Scholz,

I am addressing you today, in representation of 14 Nobel Prize winners and other 1700 scientists. In December last year, those Nobel Prize winners and well-known scientists, under the threat of a nuclear war wrote an appeal "No first use - never any use of nuclear weapons", together with the Science4Peace Forum, IPPNW and other organizations.

From the 19th to the 21st May 2023, you will meet with other G7 states in a historically significant place: on Hiroshima, on the 6th August 1945, the first atomic bomb in human history was dropped.

At a time of nuclear threats, the announced deployment of Russian nuclear weapons in Belarus, the termination of arms control agreements and the worldwide armament of the arsenals of all nuclear weapons states, it is important that the G7 summit sends a strong signal for nuclear arms control and disarmament. As heads of state and government of seven of the most important industrial nations in the world, you are responsible for finding a solution to the nuclear threat!

We ask you to take the opportunity of the G7 meeting in Hiroshima, to once and forever declare that you personally, and the government of your country, will subscribe to the "no-first use" policy and that your your government will sign the United Nations' Treaty on the Prohibition of Nuclear Weapons.

The aforementioned appeal says:

"In the face of the potential for vast and hardly imaginable global destruction or a regional catastrophe with planetary consequences, we as scientists cannot stay silent: Any nuclear attack from any side will create responses and retaliations from other nuclear powers, and in a short time millions of people could be killed, huge areas of land and sea destroyed and contaminated. The atmosphere would carry radioactive elements and soot, which could lead to nuclear winter and a global famine. Scientific studies demonstrate clearly that, once

nuclear weapons are fired, there is very little time left for clear thinking and there is no way back from decisions made in haste.

While preoccupied by war in Europe and the nuclear threat, we continue to face serious and dangerous crises which need to be resolved - especially the climate crisis - with storms, floods or droughts in many countries, threatening millions. Global food, ecosystem, social and energy crises are already seriously affecting low-income countries.

Instead of engaging in wars, we need to put all our efforts and resources to resolve these issues. As scientists we are committed to research for the benefit of humanity and to press for a peaceful world in which every living being has a future.”

The appeal demands from all governments, especially those with nuclear weapons and those in military alliances with them:

- Urgently declare publicly that you subscribe to the no-first-use policy for nuclear weapons or other weapons of mass destruction, and refrain from any use of these weapons;
- Join the Treaty on the Prohibition of Nuclear Weapons adopted by the United Nations.

The world is looking at you, and expecting that you remember the inferno of Hiroshima and Nagasaki, listen to the Hibakusha survivors, and take history and their personal testimony into account.

The world is facing immense problems and challenges, we must put all our strength to create a peaceful world, stop the climate catastrophe to enable a life for all.

With kind regards
